

Vegetable Planting Calendar for Central Maryland

NOTES

This calendar is based on a last and first frost date around May 1 and October 31, respectively. Dates may be adjusted by finding the average frost dates in your area at <https://garden.org/apps/frost-dates/>. The range of dates given are the time periods during which you can plant each vegetable and expect success. For a sustained harvest, plant a little bit of that vegetable every two weeks (succession planting).

Directly sowing seeds in the ground is possible for many vegetables. This is the default method shown for each vegetable that produces well from direct sown plants. Plants marked with a * may also be planted as seedlings for an earlier harvest.

Plants that have a long period from seed to harvest compared to their preferred growing season must be started indoors and transplanted outside as seedlings. Growing seedlings indoors requires grow lights.

If you do not wish to grow your own seedlings, buy transplants to plant during the dates shown in purple.

Harvest dates are approximate based on planting on the earliest planting date and extending to latest possible date. Achieving a sustained harvest through this period may depend on planting several successions.

KEY

Plant seeds in ground (direct sow)

Plant seeds indoors to grow seedlings (transplants)

Transplant seedlings outside

Harvest
